

**MANUFACTURING, LOGISTICS
AND USABILITY SOLUTIONS
FOR SAP BUSINESS ONE**

**Solutions that fit
your business needs.**

Boyum IT Solutions is the leading SAP solution provider, passionate about helping customers reach new levels of success with software solutions that expand SAP Business One's possibilities. Our strong individual skill sets combined with our efficient implementation methodology makes us the leading SAP Business One solution provider, with just over 9,000 customers and 200,000 users spread across 115 countries worldwide.

With the horizontal modules for system customization, dynamic Outlook integration and PCI compliant card payments, Beas Manufacturing – a comprehensive manufacturing solution for both process and discrete manufacturing, and Produmex – best of breed warehouse management and scanning solutions – and role-based cloud applications – there is something for everybody in the Boyum product portfolio.

BOYUM IT HISTORY

1997

Here the journey begins. MBJ Electronics is founded. Later the name is changed into Boyum IT.

2005

Boyum IT released the B1 Usability Package, an award-winning module for SAP Business One.

2009

Boyum IT established two new companies in respectively Boyum IT Inc. and Boyum IT GmbH.

2004

Boyum IT became a Value-Added-Reseller (VAR) for SAP Business One.

2007

Boyum IT becomes a SAP Gold partner and receives first Danish Gazelle award.

2010 - 2011

Boyum IT acquires companies in Norway and Finland.

2016

The VAR business was de-merged from the software company, Boyum IT.

2018

Acquisition of the Belgium based warehouse management and logistics software provider, Produmex.

2020

Following successful integration of the 3 companies, Boyum IT is today the largest SAP B1 add-on software provider in the world.

2016

Boyum IT ventured into vertical software by acquiring the Swiss advanced manufacturing software provider, Beas Group AG.

2020

Launch of the first microservices within Boyum IT's new cloud platform.

BEAS
MANUFACTURING

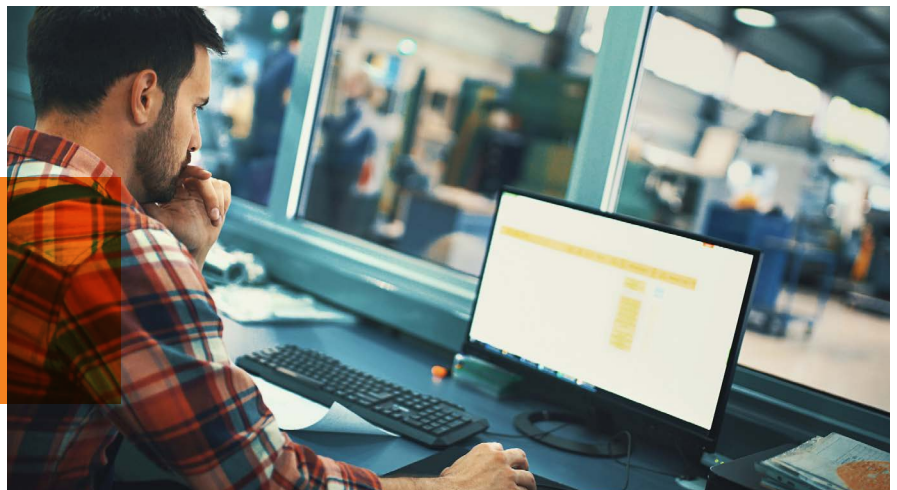

Increase manufacturing capacity and stay competitive

A global solution for discrete and process small to mid-sized manufacturing businesses implemented in over 1,000 companies. Offering comprehensive and invaluable workflows and functionalities from the planning phase through to control, implementation and fulfillment. It ensures efficiency and flexibility for manufacturers of anything from metal and plastics to machinery and apparatus, and from automotive to food.

[LEARN MORE](#)

"Beas Manufacturing and SAP Business One help us get a clear overview of our production. The actual product cost is generated alongside the production, in real time. When the production is complete we have the corresponding cost."

Tattile S.r.l. - Manufacturer of products for machine vision applications

PRODUMEX
WMS

Optimize warehouse capabilities and increase profitability

A sophisticated and comprehensive warehouse management solution designed to boost productivity and profitability by transforming your logistics processes into finely tuned operations. Supports multiple warehouses and operators and is capable of processing high volume of transactions while maintaining optimum performance.

LEARN MORE

“Produmex WMS has given us visibility and clarity of our Inventory for the Sales Team. We have been able to automate dispatching, inventory rotation, expiry date and lot management - things we had never envisioned but which we were able to accomplish with Produmex WMS.”

Tolteca Foods, wholesale distributor of products for restaurants

PRODUMEX
SCAN

Transform logistics processes and increase warehouse velocity

This mobile bar code scanning solution for warehouse operators automates the standard SAP Business One inventory transactions and business flows in real time. With rapid deployment and ease of use, allowing users to start scanning in two hours from start of the installation process, providing and accelerated return of investment.

[LEARN MORE](#)

"I like the visibility of what needs to be done on the handheld and, once scanned, the transaction is created in SAP immediately. We gained a lot of efficiency and eliminated mistakes."

Kleiner Products, inventory management,
product packaging and distribution

B1 USABILITY PACKAGE

Maximize daily productivity and transform business processes

An award-winning solution designed to enable you to customize and automate SAP Business One effortlessly, making it ready to face the most diverse scenarios and challenges. A broad feature set opens unlimited possibilities for tailoring and automation, even for non-tech professionals. The B1UP can be used with ease and speed to adapt SAP Business One to a variety of scenarios and improve end-to-end system utilization, boost user experience and dramatically increase return on investment.

[LEARN MORE](#)

"B1UP is the perfect add-on that complement the SAP Business One functionality and make the users love SAP Business One."

Fabrica de Harinas Elizondo, milling of flour or meal from grain

Engage customers and successfully manage data from Outlook

The ultimate solution for developing great relationships inside and outside your business, delivering the key benefits which will drive your company to achieve outstanding results. With CRM for Outlook you get instant access to essential information and makes it easy to perform SAP Business One tasks from within in Outlook, enabling employees from all departments to respond swiftly and accurately to leads, customers and suppliers.

[LEARN MORE](#)

"CRM for Outlook is the perfect CRM integration tool. You can access the right data in just a few seconds directly in Outlook."

COMP.net GmbH, SAP Business One partner with more than 25 years of experience

B1
iPAYMENT

Simplify payments with integrated credit card processing

Integrated with the most reliable payment gateways worldwide, B1 iPayment (B1i-pay) provides SAP Business One users with improved productivity by processing transactions in a fast and secure way. By using a tokenization system, it eliminates the risks of storing sensitive data. All credit card details are stored by your payment gateway, which is PCI DSS compliant, and a token, or representation of those details, is passed down to SAP Business One.

[LEARN MORE](#)

"We wanted to offer electronic payments, but security was a major concern. Then we found B1 iPayment and it's a great solution. First off, it does not store any sensitive data. Also, it has reduced our workload as many financial processes are now fully automated in SAP Business One."

Quali-T Consumer Service, Home Decoration and Furniture,
Retail Company

B1 PRINT & DELIVERY

Effective and automated communication

B1 Print & Delivery (B1P&D) automates the entire communication flow in SAP Business One. The module enables employees to maximize their productivity by handling day-to-day repetitive communication-related tasks, such as emailing, viewing, printing, and saving documents and reports.

[LEARN MORE](#)

"The B1 Print and Delivery is a great tool for almost all business where a large amount of monthly statements, as well as other documents need to be sent out."

Bluekey Seidor, largest SAP Business One partner in Africa

BUILD

Product management

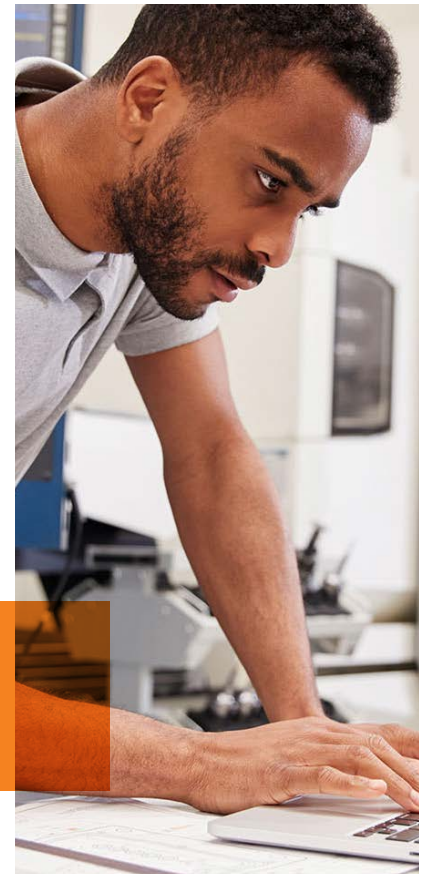

Build helps companies with integrated product development to get both **new and evolving products on the production line**; quickly, efficiently, and correctly.

Build supports the product development and production departments to manage requirements and specifications for new products, plan and keep track of progress of relevant development tasks and add finished products into SAP Business One. Build provides a clear framework to guide each department through their responsible tasks and helps to add or update new production items more quickly, determine material and labor costs based on the product structure and calculate sales prices with just one click.

LEARN MORE

“Build has made us more efficient as a business. Now we have innovative solutions that completely answer our requirements.”

The Bio-D Company, Consumer products manufacturing

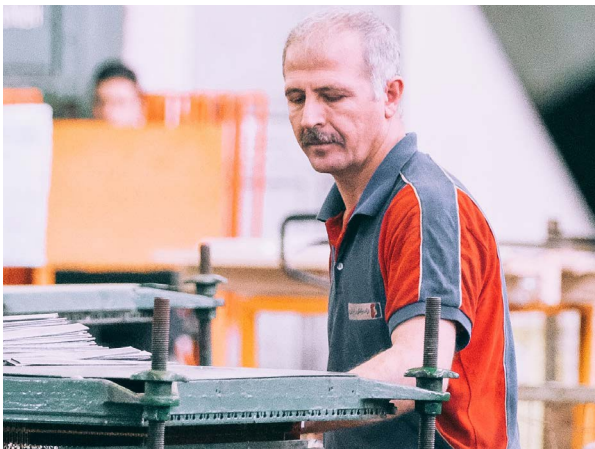

PRODUCE

Production order processing

Produce helps to **manage and execute production orders** by providing real-time communication between shop floor manager and operators, increasing work performance on the shop floor.

Produce supports the communication between shop floor managers and operators, providing real-time information to manage and execute production orders. Produce helps to get a clear overview of approved work stages, enabling the execution of time and material transactions and the reporting of finished products. Produce is built up of two separate applications that work seamlessly together. A comprehensive backlog management system helps the shop floor manager to organize and prioritize production orders and supports operators through paperless access in executing operations and collecting production data.

LEARN MORE

“Produce strongly scores with its dashboard and the clear overview of the production orders. This is especially very helpful for the operators, who can directly take over the production orders and work easily in the daily operations, thus also benefiting from efficient workflows.”

Manuel Marbach, Head of Sales and Production at Pidso

INSPECT

Quality inspection management

Inspect is a lean Quality Control application that enables quality managers to **plan, automate and delegate work**, and assists inspectors in running tests and recording results.

Inspect increases productivity of quality departments and helps them make better decisions by automating inspection operations, streamlining data collection on the shop floor, and responding to results in real-time. Inspect is built up of two separate applications that work seamlessly together. Supporting the Inspection Manager to define inspection plans and release and track inspection orders, while giving Quality Inspectors an easy-to-use solution to view and execute samples and collect quality data efficiently.

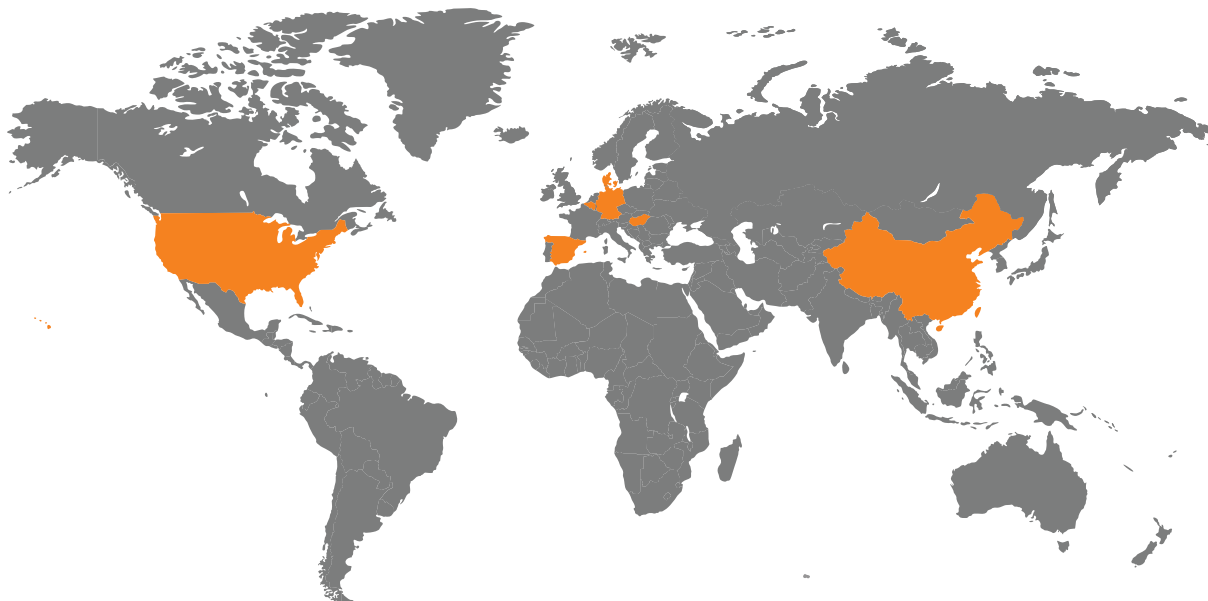

[LEARN MORE](#)

“With my current ERP-system, I am not able to automate the creation of inspection orders or to create testing steps digitally. There is no way to track progress on the shop floor, leading to slow decision making or potential problems with poor quality within the supply chain.”

“I need a solution that allows us to improve our products through effortless quality control and insightful data.”

Nicole, Quality Manager
